

Dr Ben Carpenter is a Consultant Haematologist who specialises in treating teenagers and young adults (TYA) with both malignant and non-malignant conditions. He has a particular interest in cellular therapies for non-malignant conditions including Thalassaemia, Sickle Cell Disease and Primary Immunodeficiencies. He is actively involved with clinical research in these areas, delivering gene therapy to the first UK Thalassaemia patients, and is working on both gene editing and transplant studies for Thalassaemia and Sickle Cell Disease patients. He is the UCLH JACIE clinical programme director.
